Deepinyog platform

Setup guide: from code to a live site on deepinyog.com, with free accounts, membership, courses, coaching and payments

What you are setting up

- **Website**: home, Practices for mind, body and soul (topics such as back and neck care, Marma therapy, yoga nidra or Lemurian Yoga, each with guidance and videos), programs and workshops, courses, membership and coaching prices, enquiry form. Anyone can create a free account with email or Google.
- **Student space (/app)**: free practice videos, members library, my courses, streaks and progress, notes, membership and payments.
- **Teacher space (/teacher)**: sales and revenue, enquiries, courses with waitlists, video library with access levels, classes and attendance, prices, and giving access by hand.
- **Payments**: Razorpay checkout (UPI, cards, netbanking) for memberships, courses and coaching packs.

Time needed: about an hour. Start with Razorpay **test keys**: everything works, but no real money moves.

Before you start

Account	What it does	Sign up at
GitHub	Stores the code	github.com
Vercel	Runs the website and app	vercel.com (sign in with GitHub)
Supabase	Database, logins and video storage	supabase.com
Razorpay	Takes payments. Test keys work straight away; live keys need her KYC	razorpay.com

Use an email your sister can also access for Supabase, Razorpay and the domain, since it is her business. Unzip **deepinyog.zip**; the database script is **supabase/schema.sql**.

Step 1. Create the Supabase project

1. In Supabase, click **New project** and name it **deepinyog**.
2. Set a strong database password and save it in your password manager.
3. Region: **South Asia (Mumbai)**. Click **Create** and wait a minute or two.

Step 2. Create the database

1. Open **SQL Editor**, then **New query**.
2. Paste everything from **supabase/schema.sql** and click **Run**.

3. Check: **Table Editor** lists tables including plans, courses, payments, memberships and enrollments; **plans** already has four starting prices; **Storage** has a private **videos** bucket.

The script sets up the privacy and access rules: free videos for every signed-in person, the members library for members, course lessons for buyers, and nobody can see anyone else's payments or health notes. It is safe to run again after updates.

Step 3. Sign-up settings

Public sign-up stays **on**, so anyone can create a free account. What needs a decision is email confirmation:

- **While testing**: in **Authentication**, open the email provider settings and switch off **Confirm email**. People are signed in right after signing up.
- **Before launch**: Supabase's built-in email only sends a handful of emails per hour. Connect a proper email service (for example Resend, which has a free tier) under **Authentication**, **SMTP settings**, then switch **Confirm email** back on.

Menu names in Supabase move around occasionally; search the Authentication settings for these toggles if a label differs.

Step 4. Create her teacher login

1. Open **Authentication**, **Users**, **Add user**, **Create new user**. Enter her email and a password and tick **Auto Confirm User**.
2. In **SQL Editor**, run this with her real email and name:

```
update public.profiles
set role = 'teacher', full_name = 'Her name as students see it'
where email = 'her email address';
```

Step 5. Collect the keys

Value	Where	Environment variable
Supabase project URL	Supabase: Project Settings, Data API	NEXT_PUBLIC_SUPABASE_URL
Supabase anon or publishable key	Supabase: Project Settings, API Keys	NEXT_PUBLIC_SUPABASE_ANON_KEY
Supabase service role or secret key	Same page. Secret: never share it	SUPABASE_SERVICE_ROLE_KEY
Razorpay Key Id (rzp_test_...)	Razorpay: Account and Settings, API Keys	RAZORPAY_KEY_ID
Razorpay Key Secret	Same place, shown when keys are generated. Secret	RAZORPAY_KEY_SECRET
Webhook secret	A long random text you make up now, used in Step 8	RAZORPAY_WEBHOOK_SECRET
Google sign-in switch	Type off for now; on after Step 10	NEXT_PUBLIC_GOOGLE_LOGIN

Keep secrets out of chats, screenshots and code. They only go into Vercel.

Step 6. Put the code on GitHub

1. Create a new **private** repository on GitHub called **deepinyog**, left empty.
2. Easiest: GitHub Desktop, **Add an existing repository**, pick the unzipped folder, commit, and publish to that repository.
3. Or in a terminal inside the folder: **git init**, **git add .**, **git commit**, then the push commands GitHub shows on the empty repository page.

Step 7. Deploy on Vercel

1. In Vercel: **Add New**, **Project**, import **deepinyog**. Leave the build settings as they are.
2. Under **Environment Variables**, add all seven values from Step 5 with the exact names.
3. Click **Deploy**. You get a live address like **deepinyog.vercel.app**.
4. In Supabase, **Authentication**, **URL Configuration**: set **Site URL** to that address, and add **https://deepinyog.vercel.app/auth/callback** to **Redirect URLs** (use your exact address).

After changing any environment variable later, redeploy from the Deployments tab.

Step 8. Connect the Razorpay webhook

This is the safety net: if someone pays and closes the browser before returning, Razorpay still tells the site, and their purchase is granted.

1. In Razorpay (test mode), open **Account and Settings**, then **Webhooks**, then **Add new webhook**.

2. Webhook URL: your site address followed by **/api/razorpay/webhook**, for example https://deepinyog.vercel.app/api/razorpay/webhook.
3. Secret: the same text you put in RAZORPAY_WEBHOOK_SECRET.
4. Events: tick **payment.captured** and **order.paid**. Save.
5. Also check payments are set to **capture automatically** in Razorpay's payment capture settings, which is the usual default.

Step 9. Test everything in test mode

1. Sign in at **/login** as the teacher. Open **Prices** and adjust the starting prices if you like.
2. Open **Courses** and create one course as **Upcoming**, with an early-bird price and end date. Create a second as **Open**.
3. Open **Practice topics**, then **Back and neck care**. Paste two of her YouTube video links into **Add free videos from YouTube**; titles fill in automatically.
4. In **Video library**, upload two short MP4s (under 50 MB) under **Paid videos**: one **Members only** (tick the Back and neck care topic) and one for the open course.
5. Visit **/practice** and open Back and neck care: the guide and the tagged videos should show, with locks on the paid ones.
6. In a private window, open the website, click **Start free** and create a student account. Check the free video plays and the others show a lock.
7. On the upcoming course page, click **Join the waitlist**. On the open course page, click **Enroll now** and pay using Razorpay's test card or test UPI details from their test-mode documentation.
8. Buy a monthly membership the same way. The members library should unlock right away.
9. Back as the teacher: **Sales** shows both payments, the course page shows the waitlist and enrollment, and the student's page shows their membership.
10. Send the home page enquiry form and check it appears in **Enquiries**.

Step 10. Google sign-in (optional but recommended)

Most people find "Continue with Google" easier than a password.

1. In Google Cloud Console, create a project, set up the OAuth consent screen, then create an **OAuth client ID** of type **Web application**.
2. As the authorized redirect URI, use the callback address Supabase shows on its Google provider page (it looks like https://your-project.supabase.co/auth/v1/callback).
3. Paste the Google client ID and secret into Supabase, **Authentication**, **Providers**, **Google**, and enable it.
4. In Vercel, change NEXT_PUBLIC_GOOGLE_LOGIN to **on** and redeploy. The Google button appears on sign-in and sign-up.

Step 11. Go live on deepinyog.com

1. Buy **deepinyog.com** in your sister's name.
2. Vercel: **Settings**, **Domains**, add deepinyog.com and www.deepinyog.com, with deepinyog.com as the main one.
3. At the registrar, add the DNS records Vercel shows, usually the two below.

Type	Name	Value
A	@	76.76.21.21
CNAME	www	cname.vercel-dns.com

1. In Supabase URL Configuration, change Site URL to https://deepinyog.com and add https://deepinyog.com/auth/callback to Redirect URLs.
2. Update the Razorpay webhook URL to https://deepinyog.com/api/razorpay/webhook.

Step 12. Switch Razorpay from test to live

1. Complete Razorpay activation in her name: PAN, bank account and business details. Razorpay reviews the website, so it should have clear prices, contact details, and terms, privacy and refund policies before you apply.
2. Once approved, generate **live** API keys and create the same webhook again in **live mode** with a new secret.
3. Replace the three Razorpay values in Vercel with the live ones and redeploy.
4. Make one small real purchase yourself to confirm, then refund it from the Razorpay dashboard.

How she runs it day to day

Task	Where
See money coming in	Sales: this month, last month, active members, and every payment.
Run a free live program	Programs and courses: create a Live program with price 0, the dates in the When field, co-hosts in With, and optionally a Google Form link. It shows on the home page with a Register free button.
Plan a new course	Programs and courses: create it as Upcoming. People join the waitlist from its page, which shows real demand before she records it.
Launch the course	Upload lessons in Video library and set them to that course. Switch the course to Open, then use Email the waitlist on the course page.
Add free videos	Paste YouTube links, one per line, either in Video library or straight inside a topic. Titles come in automatically; many links can be pasted at once to bring in her whole channel.
Add paid videos	Upload them under Paid videos (members, a course, or single students). Never put paid videos on YouTube, even unlisted, since those links can be shared.
Organise by topic	Practice topics: open a topic to add videos (YouTube link, upload, or one already on the site), remove videos, and edit its guide. Add a new topic from the top of the page, and delete one from inside it; deleting a topic never deletes its videos.
Coaching	When someone buys a pack, they appear under Coaching to schedule in Sales. Book the sessions with them, then click Mark one session done after each.
Someone paid in cash or UPI directly	Their student page: Give days of membership, Give course, or Give sessions.
Change prices	Prices. New prices apply to new purchases only.
New enquiry	Enquiries: contact them, set the status, and use Add as student if needed.
Live classes and attendance	Classes and attendance, same as before.

How money and access behave

- **Memberships are prepaid passes** (30 or 365 days) that do not renew on their own. Buying again before the end adds the days on top. This avoids failed auto-debits and surprise charges; automatic renewal through Razorpay Subscriptions can be added later.
- **Courses are bought once and kept.** Ticking "Members get this course included" also opens it to active members.
- **Early-bird prices** apply automatically until the end date she sets, to anyone, so waitlisted people should be told the moment it opens.
- **Refunds** are issued from the Razorpay dashboard. A refund does not remove access automatically; if needed, ask the developer to remove it in the database.

- **Video files** are never public. Each play uses a short-lived link, and the database checks access every time.

Limits worth knowing

- **YouTube videos are always free** on the site. The database refuses a YouTube link for paid access, so paid content can only be a protected upload.
- **Video size**: Supabase's free plan accepts files up to 50 MB each. Export at 720p or split long sessions.
- **Storage and bandwidth**: free plans have caps that video uses fastest. Check current limits on the Supabase and Vercel pricing pages before uploading a big library. A dedicated video host is the next step when it grows.
- **Free Supabase projects pause after about a week with no activity**. Regular use keeps it awake; restore it from the dashboard if it pauses.
- **Emails**: until an email service is connected (Step 3), confirmation emails are slow or limited.

If something goes wrong

What you see	What to check
Payment window doesn't open, or says payments aren't set up	RAZORPAY_KEY_ID and RAZORPAY_KEY_SECRET are in Vercel and you redeployed.
Paid, but nothing unlocked	The webhook URL and secret match (Step 8). Check Sales: a payment that stays unpaid there means Razorpay never confirmed it.
Google button missing	NEXT_PUBLIC_GOOGLE_LOGIN is on, and you redeployed.
Google sign-in returns to the wrong page or fails	The site's /auth/callback address is in Supabase Redirect URLs.
Sign-up says to confirm email, but no email arrives	Turn off Confirm email for testing, or connect an email service (Step 3).
Teacher lands in the student space	Re-run the Step 4 update line with the exact sign-in email.
Video won't upload	File under 50 MB, and schema.sql ran fully.

Built for Deepinyog by Smrity. Every record carries a studio id, so the platform can grow to more teachers later.
